

Autumn Budget

2017

These Budget notes are provided for general consideration only. While every care has been taken in its preparation it is essential that no action is taken or refrained from based on its contents alone. Advice is absolutely essential and so no responsibility can be accepted for any loss occasioned as a result of such action or inaction. The contents of this Budget Report are based on the proposals put forward by the Chancellor in his Budget speech. These need to be approached with caution as the details may change during the passage of the Finance Bill through Parliament. For information only. Always seek our professional advice before acting.

THE BUDGET BACKGROUND

Mr Hammond's second Budget of 2017 was presented against a different – and in many ways more difficult – backdrop from the first. The remnants of his previous Spring Budget were still haunting parliament until the Finance Bill 2017/19 received Royal Assent just six days before the Autumn Budget Day. The Government is relying on a confidence and supply agreement with the DUP to pass its Budget measures, past and present, support which itself cost an unbudgeted £1bn of extra expenditure.

Mr Hammond can at least take some comfort from the financial figures that have emerged since March. Back in the Spring the Office for Budget Responsibility (OBR) was forecasting that the government would end up borrowing £51.7bn in 2016/17 and £58.3bn (13% more) in this financial year. Ever since the actual numbers have been improving. The latest estimate for last year's borrowing is £45.7bn, while seven months into the current financial year, figures released on Tuesday showed borrowing was £4.1bn less than at the same stage in 2016/17.

This might appear to have given the Chancellor "wriggle room", but the OBR has made adjustments to its assumptions, notably productivity growth, which reinstated the Treasury's limited room for manoeuvre. The OBR has also cut its growth forecast for this year from the 2.0% it saw in March to 1.5%, 0.1% lower than the central assumption made by the Bank of England earlier this month in its Quarterly Inflation Report. Economic growth further out is also disappointing: the OBR says that by 2021/22 the UK economy will be 2.1% smaller than implied by its March growth forecasts.

Inflation, running at 3.0% on the CPI measure (and 4.0% on the old RPI yardstick), is expected to fall to 2.4% in 2018 and 1.9% the following year. While working-age benefits generally remain frozen, the government finances still suffer because of the knock-on effect on index-linked gilts. This was a problem highlighted in the most recent public sector finance figures, which showed the £6bn government interest costs in October were the highest ever recorded for that month. However, the government remains able to borrow 10-year money via the conventional gilts market at a rate of around 1.25% – just as well with nearly £120bn of borrowing to undertake in 2018/19.

So, what did emerge from this first Autumn Budget? With so many constraints and the lessons of March firmly in mind, the Chancellor was predictably cautious but, as usual, there were a few surprises, both good and bad:

- An exemption from SDLT on the first £300,000 of property value for first-time buyers (outside Scotland) buying homes worth not more than £500,000.
- A £1,350 rise in the higher rate threshold for 2018/19, to £46,350, moving towards the 2020/21 target of £50,000. However, this will not apply fully to Scotland, which sets its own higher rate threshold for non-savings and non-dividend income and, in 2018/19, may well reveal its own income tax rates on its Budget Day, 14 December
- A £400 increase in the capital gains tax annual exemption to £11,700.
- The first inflation- linked increase in the lifetime allowance, to £1.03m – and no changes to the annual allowance.
- Higher tax on diesel company cars, but no tax charge on workplace supplied electricity to recharging of employees' electric or hybrid vehicles.

In this Bulletin we look at the impact of the main changes on various groups of taxpayers. The categorisation is inevitably rather arbitrary, so it pays to read all sections. Similarly, several of the tax planning points – such as those listed below in the 12 Quick Tax Tips – are universal.

12 Quick Tax Tips

1. Don't waste your (or your partner's) £11,850 personal allowance in 2018/19.
2. Don't forget the personal savings allowance, reducing tax on interest earned.
3. Think about any changes you need to make when the dividend allowance is cut.
4. Don't ignore National Insurance contributions – they are really a tax at up to 25.8%.
5. Think *marginal* tax rates – the system now creates 60% (and higher) marginal rates.
6. ISAs should normally be your first port of call for investments and then deposits.
7. Even if you're eligible for a LISA, you still might find a pension is a better choice.
8. Tax on capital gains is usually lower and paid later than tax on investment income.
9. Trusts can save inheritance tax, but suffer the highest rates of CGT and income tax.
10. File your tax return on time to avoid penalties and the taxman's attention.
11. If you must have a company car, consider a hybrid to save income tax.
12. Don't assume HMRC doesn't know: automatic information exchange has started.

INVESTORS AND SAVERS

The Personal Allowance

In their manifesto, the Conservatives reaffirmed their goal of a £12,500 personal allowance by 2020/21. The announcement of a personal allowance of £11,850 for 2018/19 is another step on the way, albeit no more than was required by indexation. However, many people do not even use the current personal allowance (£11,500 in 2017/18), and in 2018/19 there will be a gap of over £3,400 between the allowance and the starting point for National Insurance contributions (£8,424). At the other end of the income scale, some taxpayers will have no personal allowance in 2018/19 because their income exceeds £123,700, at which point their allowance is tapered to nil.

If you or your partner does not use the personal allowance to the full, you could be paying more tax than necessary. There are several ways to make sure you maximise use of your allowances:

- Choose the right investments: some investments do not allow you to reclaim tax paid while others are designed to give capital gain, not income.
- Couples should consider rebalancing investments so that each has enough income to cover their personal allowance.
- Make sure that in retirement you (and your partner) each have enough pension income. On their own, state pension provision is enough, be it the new state pension (up to £164.35 a week in 2018/19) or the old state pension of £125.95 a week (for those who reached State Pension Age before 6 April 2016).
- If one of you pays tax at no more than basic rate and the other is a non-taxpayer, check whether it is worth claiming the transferable married allowance (£1,150 in 2017/18, rising to £1,185 in 2018/19).

The Personal Savings Allowance

The personal savings allowance (PSA) first took effect in 2016/17. Broadly speaking, if you are a:

- *basic rate taxpayer*, the first £1,000 of savings income you earn is untaxed;
- *higher rate taxpayer*, the first £500 of savings income you earn is untaxed;
- *additional rate taxpayer*, you do not receive any personal savings allowance.

'Savings income' in this instance is primarily interest, but also includes gains made on investment bonds. Although called an allowance, the reality is that the PSA is a nil rate tax band, so it is not quite as generous as it seems. The PSA's arrival meant that from 6 April 2016 banks, building societies and National Savings & Investments stopped deducting tax from interest. Since the start of this tax year, UK-based fixed interest collective funds have also paid interest without deduction of tax.

If you and your spouse/civil partner receive substantial interest income, it is worth checking that you both maximise the benefit of the PSA. However, at current miserably low interest rates – even after the recent base rate increase – you might also want to consider whether you could earn a higher income by choosing non-deposit investments.

The Dividend Allowance

The dividend allowance started life in 2016/17. At the time it was part of a reform of dividend taxation, ultimately designed to raise more revenue. The main target was private company shareholders who use dividends rather than salary to extract profits and thereby avoid National Insurance contributions.

The allowance means that in 2017/18 the first £5,000 of dividends you receive is not subject to any tax in your hands, regardless of your marginal income tax rate. Once the £5,000 allowance is exceeded, there is a tax charge, at a higher rate than in tax years before 2016/17. Like the personal savings allowance, the dividend allowance is really a nil rate band, so up to £5,000 of dividends do not disappear from your 2017/18 tax calculations, even though they are taxed at 0%.

This year's Spring Budget announced that the allowance would be cut to £2,000 from 2018/19, a measure which was finally legislated for a few days before the Budget in the Finance (No. 2) Act 2017. At worst this change could mean £975 more tax for a higher rate taxpayer and £1,143 more for an additional rate taxpayer.

The Starting Rate Band

In 2016/17, the starting rate band for savings income was launched at £5,000 and a rate of 0%. No changes to the original band or rate have been made for 2018/19. The truth is that most people are not able to take advantage of the starting rate band: if your earnings and/or pension income exceed £16,850 in 2018/19, then that probably includes you. However, if you (or your partner) do qualify, you will need to ensure you have the right type of investment income to pay 0% tax.

Planning Point: If you don't anticipate using all your personal allowance or personal savings allowance in 2017/18 think about creating more income by closing deposit accounts before 6 April and crystallising the interest in this tax year. But beware early closure penalties and shutting down accounts with better interest rates than are available now!

For next tax year, think about who should own what in terms of investments and savings. The savings and (reduced) dividend allowances mean it is not simply a question of loading as much as possible on the lower rate taxpayer of a couple. In theory, you will each be able to receive an income of up to £19,850 a year tax free in 2018/19, but only if you have the right mix of earnings, savings income and dividends.

Capital Gains Tax (CGT)

Capital gains are currently taxed as the top slice of income, but the rates are lower than those that apply to income not covered by allowances. Gains are generally taxable at 10% to the extent they fall in the basic rate band (£33,500 in 2017/18 and £34,500 in 2018/19) and 20% if they fall into the higher or additional rate bands. An additional 8% applies to gains on residential property and carried interest. For 2018/19, the capital gains tax annual exemption will rise by £400 to £11,700.

The tax rates and annual exemption mean that if you can arrange for your investment returns to be delivered in the form of capital gains rather than income, you will often pay no tax on your profits. While investment decisions should never be made on tax considerations alone, traditionally favouring capital gains over income when setting your investment goals has been a sensible approach. However, up to the (reducing) level of the dividend allowance, this is no longer automatically the case.

Planning Point: If you do not use your £11,300 annual exemption by Thursday 5 April 2018, you will lose it and a possible tax saving of over £3,100. If you have gains of over the exempt amount to realise, it could be worth deferring the excess until after 5 April to gain another annual exemption and defer the CGT bill until 31 January 2020.

INDIVIDUAL SAVINGS ACCOUNTS (ISAS)

The annual ISA investment limit for 2018/19 will be an unchanged £20,000. There will also be no change in the limit for the Lifetime ISA (LISA), which was launched earlier this year and has so far attracted much comment but only limited interest. The limit for the Junior ISA (JISA), which is attracting more university-fee-planning investors, will rise marginally from £4,128 to £4,260, as will the child trust fund (CTF) limit.

ISAs have long been one of the simplest ways to save tax, with nothing to report or claim on your tax return. The arrival of the LISA this year has complicated matters, as the new variant sits somewhere between the traditional ISA and a pension plan. If you are thinking of a LISA instead of either of these, you would be well advised to seek advice before taking any action.

Over time substantial sums can build up in ISAs: if you had maximised your ISA investment since they first became available in April 1999, you would by now have placed over £185,000 largely out of reach of UK taxes.

Planning Point: The cut in the dividend allowance from 2018/19 means that your ISAs should be reviewed. If you have not already done so, it makes sense to undertake a review before making any year end top up.

Venture Capital Trusts (VCTs) and Enterprise Investment Schemes (EISs)

VCTs and EISs have been subject to many rule changes in recent years, with some significant reforms – prior to those announced in the Budget - being introduced two years ago. Those 2015 reforms changed the nature of some schemes; for example, VCTs are no longer able to make new investment in management buy-outs (MBOs). The latest proposals include:

- *A “risk to capital” requirement* This is designed to focus the investment made by VCTs, EISs and seed enterprise investment schemes (SEISs) on companies where there is a real risk to the capital being invested, and exclude from investment those companies and arrangements intended to provide “capital preservation”. This requirement will take effect from Royal Assent of the Finance Bill in Spring 2018, subject to state aid rules.
- *Increased limits for investments in knowledge-intensive companies* There will be a doubling of the amount an individual may invest under the EIS in a tax year to £2 million, provided any amount over £1 million is invested in one or more knowledge-intensive companies. Similarly, the annual investment limit for knowledge-intensive companies receiving investments under the EIS and from VCTs will double to £10 million, although the lifetime limit will remain at £20 million. Knowledge-intensive companies will be able to use the date when their annual turnover first exceeds £200,000 to determining the start of the initial investing period, instead of the date of first commercial sale. All these changes take effect from 2018/19, subject to state aid rules.
- *Relevant investment* The current rules which exclude certain investments made before 2012 from the lifetime funding limits for companies receiving investments under the EIS and VCT scheme will be scrapped from 1 December 2017, subject to state aid rules.
- *Further VCT rules tightening* Several other changes will be made to VCT rules in the Finance Bill 2017-18, including an increase in the proportion of VCT funds that must be held in qualifying holdings to 80% and an anti-abuse rule to prevent loans being used to preserve and return equity capital to investors.

Interest in VCTs, EISs and SEISs has grown as more aggressive forms of tax planning have come under sustained (and largely successful) HMRC attack and pension opportunities have been further constrained. In 2016/17 there was a 28% increase in VCT investment, which might help to explain the measures announced by Mr Hammond.

Pay Later, Not Now?

For higher and additional rate taxpayers, there can be a case for considering the options for tax deferral, once the decision on which sector to invest in has been made. The potential advantages and disadvantages of tax deferral include:

- What would be going to the Treasury instead remains invested, enhancing potential returns.
- There is the possibility that tax rates will be lower when the investment is realised. The opposite risk is that the 50% top tax rate could reappear under a new government, which might emerge at any time.
- Some tax liability might disappear completely. For example, under current rules there is generally no capital gains tax on death.
- The investor may change their country of residence, giving rise to a lower tax rate or possible tax savings during the period of transition between the old and new homes.

There is a variety of tax deferral options available but, as ever, advice is needed in making the 'customer' a client of HMRC.

ESTATE PLANNERS

Nil Rate Band

The nil rate band reached its current level of £325,000 in April 2009. It has been frozen since then and the freeze will continue until at least April 2021. Had the nil rate band been increased in line with CPI inflation, it would be about £400,000 in 2018/19.

A frozen nil rate band drags more estates into the IHT net and, if you are already caught, adds to the amount of tax that will be levied. Since April 2009, average UK house prices are up by about 41%, according to Nationwide, and UK share prices have risen by about 100% (March 2009 marked their low point in the wake of the financial crisis).

Residence Nil Rate Band

The Residence Nil Rate Band (RNRB) came into effect on 6 April 2017 with an initial figure of £100,000. For 2018/19 the RNRB will rise to £125,000, en route to reaching £175,000 in 2020/21, after which increases will be inflation-linked. It does help to ease the burden of IHT for many estates, but it is by no means a panacea. The government's IHT tax take is still expected to carry on increasing according to the OBR projections.

IHT Yearly Exemptions

The nil rate band freeze makes the yearly IHT exemptions all the more important:

- *The £3,000 annual exemption.* Any unused part of this exemption can be carried forward one tax year, but it must then be used *after* the £3,000 exemption for that year. So, for example, if you made a gift of £1,000 covered by the annual exemption in 2016/17, you can make gifts totalling £5,000 covered by the annual exemption in 2017/18 by 5 April 2018.
- *The £250 small gifts exemption.* You can make as many outright gifts of up to £250 per individual per tax year as you wish free of IHT, provided that the recipient does not also receive any part of your £3,000 annual exemption.
- *The normal expenditure exemption.* Any gift that you make is exempt from IHT if:
 - it forms part of your normal expenditure; and
 - taking one year with another it is made out of income; and
 - it leaves you with sufficient income to maintain your usual standard of living.

Will Review

The arrival of the RNRB should have meant that you reviewed your Will. One of the stranger consequences of another nil rate band – albeit one only available at death – has been that it may require you to make gifts away from a surviving spouse or civil partner on first death, if you want to minimise your joint IHT bill.

Planning Point: If you are making an annual exemption gift by way of a cheque, remember that legally the gift is only made once the cheque is cleared. Thursday April 5 is the final banking day of 2017/18, so a cheque given on the previous Easter weekend may not clear in time.

BUSINESS OWNERS

Corporation Tax Rate

The rate of corporation tax fell to 19% for the financial year starting on 1 April 2017. A further reduction to 17% from April 2020 was legislated for in Finance Act 2016. Although a while ago there was some talk about cutting rates to below 15%, this idea has disappeared along with hopes of a government financial surplus by 2020.

The falling rate of corporation tax is one of the reasons why the reform of dividend taxation was introduced from 2016/17. Lower corporation tax rates strengthen the case for incorporation as an attractive tax option for business people. Operating via a company creates the opportunity to draw income as dividends, free of NICs, and shelter profits at a corporation tax rate that is below the basic rate of income tax – rather than personal tax rates of up to 45%. The higher rates of tax on dividends above the dividend allowance were designed to claw back some of the lost NICs revenue and discourage incorporation, a move reinforced by the forthcoming cut in the allowance.

Capital Allowances

Capital allowances have been subject to a variety of changes in recent years, ostensibly to encourage an increase in business investment.

The Annual Investment Allowance (AIA), which gives 100% initial relief for investment in plant and machinery, was reduced to £200,000 from 1 January 2016. Despite some hopes that it might increase, the AIA was left unchanged in the Budget.

Pension Changes

Mercifully, there were fewer pension changes in April 2017 than there were in previous years. Much of what is happening is just a continuation of previous reforms:

- Auto-enrolment into pension arrangements began to be phased in just over five years ago and all existing employers should now have met the requirements. New employers need to have a workplace pension in place as soon as they hire their first employee.
- It is expected that, as happened in 2017/18, the earnings threshold for auto-enrolment in 2018/19 will *not* rise in line with the personal allowance and will thus remain at £10,000.
- Changes to women's state pension age (SPA) continue to work through the system. Women's SPA is currently around 64¹/₄, on its way to 65 in November 2018. Two years later both men and women will share an SPA of 66.
- The money purchase annual allowance has now been reduced retrospectively from £10,000 to £4,000 with effect from 6 April 2017. This cut could affect you if you have started to draw your pension under the 2015 flexibility rules, but you and/or your company are still making pension contributions.

The Budget confirmed that the lifetime allowance would rise to £1.03 million from 2018/19, while no further changes to the annual allowance were announced.

Planning Point The automatic enrolment contribution rate rises from 6 April 2018 to 5% of band earnings from 2%, of which the employer minimum doubles to 2%. Thus, many employees will see a tripling in their rate. It would be wise to make them aware of the increase before it – potentially – cuts their net pay.

Employer's National Insurance Contributions

2017/18 marked the introduction of measures to curtail cafeteria remuneration packages, which had allowed employees to sacrifice salary for less highly taxable (and NICable) benefits. Since 6 April 2017, most newly established arrangements have been subject to employer's 13.8% NICs (and taxed on the employee) based on the amount of salary given up rather than the notional value of the fringe benefit (if any). Transitional provisions for pre-6 April arrangements gave some limited exemptions, most notably for salary sacrifice schemes linked to pension contributions.

Planning Point The new rules for salary sacrifice arrangements had transitional reliefs which for many pre-6 April 2017 arrangements only last for 2017/18. However, the old rules will continue for up to four years for company cars where the sacrifice arrangement was in place by 5 April 2017.

Dividends or Salary...

Regular changes to National Insurance contributions and tax rates have altered the mathematics of the choice between dividends and salary, with the introduction of the 19% corporation tax rate for the financial year 2017 being the most recent revision to have an impact.

For shareholder/directors able to choose between the two, and not caught by the IR35 personal company rules, a dividend remains the more efficient choice even if no dividend allowance is left, as the example shows. However, a pension contribution (within the annual allowance provisions) could avoid all immediate tax and NIC costs.

Make Mine a Dividend

A director/shareholder has £25,000 of gross profits in his company which he wishes to draw, either as bonus or dividend. Assuming the company pays corporation tax at the rate of 19% and the director already has annual income in excess of £46,500, of which dividends already account for more than the dividend allowance, the choice can be summarised thus:

	Bonus £		Dividend £	
	Higher rate	Additional rate	Higher rate	Additional rate
Marginal gross profit	25,000	25,000	25,000	25,000
Corporation tax @ 19%	N/A	N/A	(4,750)	(4,750)
Dividend	N/A	N/A	20,250	20,250
Employer's National Insurance Contributions £21,968 @ 13.8%^	(3,032)	(3,032)	N/A	N/A
Gross bonus	21,968	21,968	N/A	N/A
Director's NICs £21,968@ 2%	(439)	(439)	N/A	N/A
Income tax *	(8,787)	(9,886)	(6,581)	(7,715)
Net benefit to director	<u>12,742</u>	<u>11,643</u>	<u>13,669</u>	<u>12,535</u>

^ The Employment Allowance is assumed to be used or unavailable.

*Tax on dividends at 32.5% for higher rate taxpayer and 38.1% for additional rate taxpayer.

...Or nothing at all?

For some business owners, the ultimate way to limit their tax bill is to choose to leave profits in the company rather than draw them either as dividend or salary. With the top rate of income tax currently at 45% - and marginal rates potentially much higher - there is an obvious argument for allowing profits to stay within the company, where the maximum tax rate is 19% and set to fall to 17%.

This strategy has tax risks in terms of eligibility for CGT entrepreneurs' relief and inheritance tax business property relief. Money left in the company is also money exposed to creditors, so professional advice should be sought before turning a business into a money box.

EMPLOYEES

Company Cars

The company car benefit scales undergo another uplift in 2018/19, marking another turn of the screw on this still popular fringe benefit. As the table shows, this is not the end of the story:

Tax Year	Changes
2018/19	<ul style="list-style-type: none">• 4% will be added to the lowest scale charges (0g/km-50g/km band), making the minimum charge 13%. This looks targeted on drivers of electric and hybrid vehicles.• 3% will be added to the 51g/km-75g/km band, taking it up to 16%.• 2% will be added to all other scale charges• The additional charge for a diesel car will rise from 3% to 4% unless it meets the RDE2 emission standards (which it almost certainly will not).• The maximum charge will stay at 37% and will apply for petrol engine cars with emissions of 180g/km and above and diesel engine cars with emissions of 165g/km and above.
2019/20	<ul style="list-style-type: none">• A further 3% will be added to <i>all</i> scale charges, making the minimum charge 16% (for the 0g/km-50g/km band).• The maximum charge will stay at 37% and will apply for petrol engine cars with emissions of 165g/km and above and diesel engine cars with emissions of 150g/km and above.

Once again, the changes will increase the tax on low-emission cars significantly because the same 3% addition applies to all but the lowest emission vehicles, whether the existing (2017/18) charge is 13% or 37% (where there is no change). For example, the scale benefit charge on a Mercedes S500 Hybrid with just 65g/km emissions will rise from 13% in 2017/18 to 16% in 2018/19, increasing the tax payable by nearly a quarter. At the other end of the Stuttgart S500 range, the scale benefit charge on the faster and more polluting S500 AMG S65 with 279g/km emissions will be unchanged at the maximum 37%.

If you are changing your car next year, think ahead of what it will cost you in tax terms – or maybe even take cash instead, if you have the option.

Planning Point: If you currently enjoy 'free fuel' but your private mileage is modest, you could be better off paying your own way, even if your employer does not compensate you for the lost benefit. Fuel scale charges now go up each year in line with the RPI, even if fuel prices fall.

Pensions

The pensions landscape has altered dramatically in recent years and the latest change – to the money purchase annual allowance – has only just made its way on to the statute book:

- Automatic enrolment for employees in a workplace pension arrangement has finished its roll out, meaning all employers must by now have complied with the rules. The next stage of the process will be an increase in the contribution rates from next April. For employees, the rate will triple to 3% of "band earnings" (£6,032 - £46,350 in 2018/19), whereas for employer contributions rates will double to 2%. In April 2019 there is another increase due, taking the employee rate to 5% and the employer rate to 3%. Most experts agree that the 8% total rate is still too low to achieve an adequate retirement income.
- The new state pension started in April 2016, replacing both the basic state pension and the second state pension (S2P). In the long term the reform will create more losers than winners as the earnings-related element has been removed.
- State pension ages (SPAs) continue to rise, with an increase to 67 due between April 2026 and March 2028. Another rise to 68 is now scheduled between April 2037 and March 2039, although the necessary legislation will not appear for some years. By 2050 – so if you are 36 or under now – you could be facing an SPA of 69.

- As mentioned above, legislation has just been passed by parliament to amend the money purchase annual allowance. With retrospective effect to 6 April 2017, it will be a cut from £10,000 to £4,000. This could affect you if you are drawing your pension benefits flexibly, but you and/or your employer are continuing to make pension contributions.

Planning Point: The carry forward rules allow unused annual allowances to be carried forward for a maximum of three tax years. Thus 5 April 2018 will be your last opportunity to rescue unused allowance of up to £40,000 from 2014/15.

Salary Sacrifice

National Insurance contributions (NICs) can cost up to 25.8% of gross pay – up to 13.8% for the employer and 12% for the employee. The corollary is that avoiding NICs can save up to 25.8% of pay. A widely applied example of turning NICs to an advantage is in the use of salary sacrifice to pay pension contributions. Instead of the employee making personal contributions out of their net pay, the employee accepts a lower salary and the employer makes a pension contribution. If the employer passes on all of the NICs savings, the pension contribution could be up to almost 34% higher, as the example shows.

A Worthwhile Sacrifice

Tax Rate	Personal Contribution		Salary Sacrifice Employer Contribution (sacrificed amount + NIC saving)	
	20%	40%	20%	40%
	£	£	£	£
Gross Salary	1,000	1,000	Nil	Nil
Employer Pension Contribution	Nil	Nil	1,138	1,138
Employer NI Contribution (13.8%)	138	138	Nil	Nil
Total Employer Outlay	1,138	1,138	1,138	1,138
Employee Salary	1,000	1,000	Nil	Nil
Less Income Tax	(200)	(400)		
Less NI Contributions (12%/2%)	(120)	(20)		
Net Pay = Net Pension Contribution	680	580		
Tax Relief	170	387		
Total Pension Contribution	<u>850</u>	<u>967</u>	<u>1,138</u>	<u>1,138</u>

Planning Point From 6 April 2016 the standard lifetime allowance was reduced again, by £250,000 to £1m. It will rise to £1,030,000 on 6 April 2018. However, there is still the possibility of claiming transitional protection of up to £1.25m.

RETIREE/AT RETIREMENT

The Pension Landscape in late 2017

There have been many changes to pensions in recent years, with another significant set of reforms having taken effect in April 2016. These include:

- Three reductions in the standard lifetime allowance brought it down from £1.8m in 2011/12 to £1m from 6 April 2016. This allowance effectively sets a tax-efficient ceiling for the value of pension benefits and will, from April 2018, start to rise in line with CPI inflation, meaning it will be £1.03m in the coming tax year.
- Further increases to State Pension Age (SPA), both legislated for and planned. For women, SPA is now about 64¹/₄. For men it remains at 65 – for now.
- New rules, which have given much greater flexibility in drawing benefits from money purchase schemes, started on 6 April 2015 and have encouraged many people to turn their entire pension pot into (mostly taxable) cash. The new flexibility was accompanied by more generous tax treatment of death benefits, adding to the opportunities pensions offer for estate planning.
- The new single-tier state pension started on 6 April 2016. If you are near to state pension age, it is worth checking whether your National Insurance contribution record will gain you the maximum available.

Interest Rates: A rate rise at last...

When the Bank of England base rate was cut to 0.5% on 5 March 2009, nobody anticipated that it would remain unchanged until 2016 and then be halved to 0.25%. Even now, after the Bank increased the Bank Rate to 0.5% earlier this month, the OBR does not expect a rate of 1.25% to be reached until 2022.

The main UK banks seem to have long since given up competing for deposits in this low interest rate environment, witness the fact some have only passed on the full Bank Rate increase to borrowers. The best instant access rates for new accounts are now from challenger banks at around 1.3%, A similar picture emerges for cash ISAs, where the best rates for instant access are little more than 1%.

If low interest rates are a concern to you:

- Make sure you take maximum advantage of your personal savings allowance and, where possible, your starting rate band.
- Maximise your cash ISAs, which pay interest tax free.
- Regularly check the interest rate on all your deposit accounts. Just because the Bank of England has increased Bank Rate, do not assume your deposit rate will move in the same way. It is especially important to watch accounts with bonus rates – once the bonus goes they can look very unattractive. Do not simply wait for the next statement: if you are only earning 0.1%, you need to know now.
- Be wary of tying your money up in a fixed-term deposit for five or more years simply to achieve an interest rate only around 2.5%. A lot can happen in five years, not the least of which is a general election.
- Consider investing in UK equity income funds, where yields of 4% and more are widely available. You will lose capital security, but your initial income would be usefully higher and the dividend allowance currently lets you receive £5,000 of dividends before paying any dividend tax, regardless of your personal tax rate. However, in 2018/19 the allowance will fall to £2,000.

Planning Points: If you have not yet arranged an ISA or invested up to the 2017/18 maximum, think about doing so. If you are unsure where to invest given current market levels, you can always leave your money on deposit, even in a stocks and shares ISA. Just don't expect it to earn much interest. The cut in dividend allowance from 2018/19 has made stocks and shares ISAs more attractive.

Drawing your pension

If you are due to start drawing an income from your pension plan, make sure that you take *advice* about your options. When the new rules were first introduced the government launched Pension Wise to help people through the complexities, but this service only offers guidance, not personal advice: you will still have to make the final decisions. The Pension Wise guidance does not attempt to integrate pension choices with your other financial planning, eg estate planning.

If you think how long you might live with the cost of a wrong choice, it is clear that getting independent advice is the route to take.

Planning Point: The changes to the death benefit rules on pensions from 6 April 2015 should have prompted a review of the pension scheme and/or the expressions of wish regarding the recipients of pension death benefits. If you have not done so, now is the time. In theory your pension plan could provide income for future generations, as your beneficiaries will be able to pass the remaining fund to their children and so on down the line.

PARENTS

Child benefit

The High Income Child Benefit Tax Charge – the child benefit tax – came into being a little over four years ago. If you or your partner has income of £60,000 or more in the current tax year there will be a tax charge equal to your total child benefit unless you have taken a decision to stop benefit payments.

Between £50,000 and £60,000 of income, the tax charge is 1% of benefit for each £100 of income above £50,000. The result can be high marginal rates of tax in the £50,000-£60,000 income band. If you have three children eligible for child benefit, the marginal rate is 65%.

Planning Point: As the High Income Child Benefit Tax Charge is based on taxable income, you could reduce the impact of the tax by making a pension contribution.

Tax-free childcare payment

A new payment for working parents was announced just before the 2013 Budget and, after assorted delays, has been rolled out during 2017 – with a few hiccups. The new scheme pays 20% of childcare costs up to £2,000 per child (up to the age of 11), per year, eventually replacing the existing childcare vouchers system. For couples, it is only available if both partners are working and each earning at least the National Minimum Wage or Living Wage for 16 hours a week (£120 if you are 25 or over in 2017/18, rising to £125.28 in 2018/19). An individual upper income limit of £100,000 also applies.

In some circumstances the childcare voucher scheme is preferable, eg it has an upper age of 15. You may need to act fast to secure the advantage if you are not already using it, as the scheme closes to new entrants in April.

Junior ISAs

Junior ISAs (JISAs) were launched in November 2011 with an annual investment limit of £3,600, which has since been increased to £4,128 in 2017/18 (and £4,260 in 2018/19). JISAs can be invested in cash deposits and/or stocks and shares in any proportion and can usually be arranged for any child aged under 18 who was born before 1 September 2002 or after 2 January 2011. A child cannot have both a JISA and a Child Trust Fund account (which has the same investment limits). It is possible to transfer Child Trust Fund accounts to a JISA, a move that may result in reduced fees and a wider investment choice.

University funding

The £9,250 a year maximum tuition fee for new 2017/18 students in England and Wales is, for now, a fact of student life. All maintenance assistance is now also by way of loans.

If you have children likely to go to university, it makes sense to consider your funding options. For example, JISAs are a potentially valuable tool to build up a fund by age 18. For those who prefer a greater degree of control over the student's access to the investment at age 18 (while retaining tax efficiency) collective investments held subject to an appropriate trust can look attractive, as could an offshore investment bond.

Despite these tax-efficient "pre-funding" opportunities, under the current rules many experts consider that it makes sense to take the student fee loans while at university rather than pay fees from capital. That is because repayment only begins once earnings reach £21,000 (£25,000 from 2018, according to a statement made by the Prime Minister last month) and any debt is written off after 30 years from the April after graduation. There is also the possibility of reform and some loan write-offs in the future, regardless of the government's hue.

University debt will add to the difficulties young people face in getting onto the now rapidly rising property ladder. Another reason, maybe, why parents and grandparents might like to consider tax-effective "pre-funding".

MAIN INCOME TAX ALLOWANCES AND RELIEFS

	2017/18	2018/19
	£	£
Personal allowance – standard	11,500	11,850
Personal allowance reduced if total income exceeds ∞	100,000	100,000
Transferable tax allowance (marriage allowance) §	1,150	1,185
Married couple's allowance * – minimum amount	3,260	3,360
– maximum amount	8,445	8,695
Maintenance to former spouse *	3,260	3,360
Married couple's allowance reduced if total income exceeds ¶	28,000	28,900
Employment termination lump sum limit	30,000	30,000

∞ For 2017/18 and 2018/19 the reduction is £1 for every £2 additional income over £100,000. As a result, there is no personal allowance if total income exceeds £123,700 (£123,000 for 2017/18).

§ Available to spouses and civil partners born after 5 April 1935, provided neither party pays tax at above basic rate.

* Relief at 10%. Available only if at least one of the couple was born before 6 April 1935.

¶ For 2017/18 and 2018/19 the reduction is £1 for every £2 additional income over the total income threshold. **Only** the standard allowance is available if total income exceeds: -

	2017/18	2018/19
	£	£
Taxpayer born before 6 April 1935 [married couple's allowance]	38,370	39,570

INCOME TAX RATES

	2017/18	2018/19
	£	£
Starting rate	0%	0%
Starting rate on savings income	1-5,000	1-5,000
Personal savings allowance (for savings income)		
- Basic rate taxpayers	1,000	1,000
- Higher rate taxpayers	500	500

Maximum tax at basic rate+	6,700+¶	6,900+¶
Higher rate - 40%	33,501-150,000+¶	34,501-150,000+¶
Tax on first £150,000+	53,300+	53,100+
Additional rate on income over £150,000	45%	45%¶
Discretionary and accumulation trusts (except dividends)	45%	45%¶
Discretionary and accumulation trusts (dividends) °	38.1%	38.1%
Tax credit attaching to dividends	N/A	N/A
Dividend nil rate band (dividend allowance)	1-5,000	1-2,000
Basic rate on dividends	7.5%	7.5%
Higher rate on dividends	32.5%	32.5%
Additional rate on dividends	38.1%	38.1%
High income child benefit charge	1% of benefit per £100 income between £50,000 and £60,000	

+ Assumes starting rate band not available and personal savings allowance is ignored. £5,900 on first £34,500 (£5,700 on first £33,500 in 2017/18) and £52,100 (£52,300 in 2017/18) on first £150,000 if full starting rate band is available.

¶ For Scotland, the 2018/19 tax bands and tax rates, which cover only non-dividend and non-savings income, are not yet known (the Scottish Budget is due on 14 December 2017). Other income is subject to the UK-wide rates shown above.

For 2017/18 the Scottish basic rate limit was £31,500, with the higher rate threshold £43,000, while tax rates were the same as the rest of the UK.

° Up to the first £1,000 of gross income is generally taxed at the standard rate, ie. 20% or 7.5% as appropriate.

CAR BENEFITS

The charge is based on a percentage of the car's "price". "Price" for this purpose is the list price at the time the car was first registered plus the price of extras.

For cars first registered after 31 December 1997 the charge, based on the car's "price", is graduated according to the level of the car's approved CO₂ emissions.

For petrol cars with an approved CO₂ emission figure.

CO ₂ g/km ¹	% of price subject to tax ²		CO ₂ g/km	% of price subject to tax ²		CO ₂ g/km	% of price subject to tax ²	
	17-18	18-19		17-18	18-19		17-18	18-19
50 or less	9	13	120-4	23	25	160-4	31	33
51-75	13	16	125-9	24	26	165-9	32	34
76-94	17	19	130-4	25	27	170-4	33	35
95-99	18	20	135-9	26	28	175-9	34	36
100-4	19	21	140-4	27	29	180-4	35	37
105-9	20	22	145-9	28	30	185-9	36	37
110-4	21	23	150-4	29	31	190 or more	37	37
115-9	22	24	155-9	30	32			

Notes

1. The exact CO₂ emissions figure should be rounded down to the nearest 5 g/km for levels of 95g/km or more.
2. For diesels add 3% for 2017/18, subject to a maximum charge of 37%. For diesels add 4% for 2018/19 unless RDE2 emissions standards are met, subject to maximum charge of 37%.

Car fuel benefits

For cars with an approved CO₂ emission figure, the benefit is based on a flat amount of £23,400 (£22,600 for 2017/18). To calculate the amount of the benefit the percentage figure in the above car benefits table (that is from 9% to 37%) is multiplied by £23,400. The percentage figures allow for a diesel fuel surcharge. For example, in 2018/19 a petrol car emitting 132 g/km would give rise to a fuel benefit of 27% of £23,400 = £6,318.

INHERITANCE TAX

	Cumulative chargeable transfers [gross]		tax rate on death %	tax rate in lifetime* %
	2017/18 £	2018/19 £		
Nil rate band+	325,000	325,000	0	0
Residence nil rate band¶	100,000	125,000	0	N/A
Residence nil rate band reduced if estate exceeds°	£2,000,000	£2,000,000	N/A	N/A
Excess above available nil rate band(s)	No limit	No limit	40-	20

* Chargeable lifetime transfers only.

+ On the death of a surviving spouse on or after 9 October 2007, their personal representatives may claim up to 100% of any unused proportion of the nil rate band of the first spouse to die (regardless of their date of death).

¶ On the death of a surviving spouse on or after 6 April 2017, their personal representatives may claim up to 100% of any residence nil rate band of the first spouse to die (regardless of their date of death, but subject to the tapered reduction).

° For all tax years the reduction is £1 for every £2 additional estate over £2,000,000. As a result, there is no residence nil rate band available in 2018/19 if the total estate exceeds £2,250,000 (£2,500,000 on second death if the full band is inherited).

- 36% where at least 10% of net estate before deducting the charitable legacy is left to charity.
